

## PRESS RELEASE

May 2013

BON017

### **BONINGALE GREENSKY HIGHLY COMMENDED IN GROWER OF THE YEAR AWARDS**

**Boningale GreenSky's unique green roof innovations have been recognised in one of the UK's most prestigious horticultural awards.**

Boningale GreenSky, who has pioneered the development of a new range of SkySuperstrates and SkyPlugs for green roofs, was highly commended in the Business Innovation of the Year category of the Horticulture Week's Grower of the Year Awards.

Both products, which were unveiled at Eco-Build 2013 in March, promise to transform the horticultural industry because they help designers and installers to create long-lasting and high performance green roofs.

The SkyPlugs plants have been specifically engineered to grow in green roofs, while SkySuperstrates is a range of substrates that allow installers to choose the ideal medium, according to geographical location, rainfall and required maintenance.

The award, which was announced at a ceremony at the Lancaster London, is testament to the hard work by the green roof experts at Boningale and the University of Sheffield, who collaborated to produce the new products, says Boningale GreenSky Manager, Maggie Fennell.

"It has taken a long time to develop and produce these new products for the commercial market, so to receive a highly commended from the judges in the Grower of the Year awards is very satisfying for us," she said.

"We are getting a very positive response from across the globe about these products and are following up many enquiries that we received at EcoBuild. It's just the start of a very exciting journey for Boningale GreenSky."

Boningale GreenSky were also finalists at the prestigious Environment and Energy Awards, which recognises environmental leadership initiatives and technical innovations developed over the past year.
